

# The True New Dimension in Health and Medicine

© Copyright 2003 by Dr. W.G.D. Kessler, Germany

It was not only for money when I started to go for visions and satisfaction in medicine. In fact I should have had satisfaction in New York in the 70s, being part of Frank Veith's lung transplant team at Montefiore Hospital, doing mostly the electron microscopical work. And I should have been content receiving a double salary at Damp 2000 Rehabilitation Center in Germany, serving in part as the doctor for the German National Team of Judo.

On the contrary; I was frustrated.

Today I am writing this article from my farm in Georgia, a most idyllic place, which I'd like to share with you—together with the therapy of the 21st century.

First, let me share with you *"Inscription for a Garden Gate"* by Pearl Council Hiatt:

*"Pause, friend, and read before you enter here  
This vine-clad wall encloses holy ground  
Herein a mellowed garden dreams away the years  
Steeped in serene sweet light and muted sound  
Herein tranquility and peace abide  
For God walks here at cool of evening-tide  
Pause, friend, and strip from out your heart  
All vanity, all bitterness, all hate  
Quench, for this hour, the fever of your fears  
Then, treading softly, pass within this gate  
There, where the old trees wait hushed and dim  
May you find God and walk a while with Him."*

Here, I recharge my battery after 7 weeks of intense work at my clinic in northern Germany. Only my wife and one of my twenty nurses are with me. All the others are either on vacation or in a training program.

Biophysics has made the difference both in my life and my profession as a Medical Doctor. Thank God I was intelligent enough to grab the ball and keep running with it. That's how I got rid of the asinine insurance companies who were suffocating and draining me of my energy. But – to be honest – in those days I did not have much to offer. You may have called it "SMA" medicine, which

translates to "save my ass medicine."

"Doctors rob themselves of the most rewarding and interesting healing methods," said a naturopathic friend to me years ago. However, my own health problems and financial dependency upon insurance companies made me look around and got me on the right track. Some even call us the "Mayo Clinic for Alternative Medicine," but how surprised I was on September 7, 2003, meeting a doctor from Arizona after my presentation at Dr. Garry Gordon's Convention in Phoenix, Arizona.

After being introduced to the our System, this doctor decided in a heartbeat to get 5-7 of his technicians trained. He is apparently going a similar road as I am – away from insurance companies. And he knows: if you have something effective to offer, people are more than willing to pay for it.

ONDAMED means "medical wave." It is an induction, rebuilding the electromagnetic life field of diseased tissue. This system applies specific waves to non-functional parts of the body.

Both the blocked tissue and the necessary specific induction-wave are found by a simple pulse test in cooperation with the this Biofeedback device. The wave ranges between 0.1 to 32.000 Hertz and 60 milli-Tesla. By producing a specific, single wave, for each individual patient, the system works very powerfully and effectively. Special brain programs eliminate pathological impulses stored in the CNS.

The device offers 172 ingeniously designed programs as well more than 200 microorganism-related frequencies, to effectively restore a wide spectrum of health disorders. The System is essential for both symptomatic and systemic treatment. ONDAMED is a must and a basic tool for any therapist in the 21st century.

It has brought back to life the initial idea to heal, a desire I had when I started my medical studies 36 years ago.

What a wonderful position it gave to me! I know within minutes – without any hints from the patient – where the diseased areas are and how I can treat them. Plus, it is so convincing that the patient is willing to pay for it. It provides three major advantages:

- ◆ The improvement of the patient's health condition.
- ◆ Powerful information thereby providing an advanced position for the therapist.
- ◆ Sufficient funds to run a clinic.

The therapy had proven so successful in my clinic, that I decided to meet the inventor Rolf Binder at Medicine Week in Baden Baden, Germany. This method needed to be spread to the medical community world-wide. Rolf agreed and together with Silvia Locke, located in New York, ONDAMED Inc. was founded. Silvia, having a child with health problems herself, was extremely impressed by the efficacy of the system, that she decided to run the company. Within months, this was in such demand, that the manufacturer, Binder GmbH in Germany, could not produce enough units. So, if you are interested to understand the workings of this system, please keep on reading.

Before you sit down with me in front of this outstanding device, have a glass of water in between, and learn the details, you will want to understand the definition "blockage."

During the last twenty years, I have experienced an increasing awareness of the fact that chronic diseases seem to arise through an accumulation of tissue blockages that may then be treated accordingly. These blockages can be classified under conventional diagnostic terms, such as, "psychological or psychic blockages," "lymph blockages," "organ blockages," "metabolic blockages," or chronic infection. Normal function is impaired there.

The patient may or may not feel these blocked sites. For instance: recurrent pain, or tinnitus in one ear suggests that the body cannot quite overcome an ongoing inflammatory process there. Chronic pain in a joint is a constant cry for energy in that tissue. Normal energy flow is blocked there.

You may compare this with a sophisticated irrigation system. If some channels are blocked, water is in excess somewhere and lacking elsewhere. Somebody is drowning somewhere and another is drying out elsewhere. However, other blocked sites, such as a tooth-related problem, may not be known by the patient.

This device finds very precisely where these blocked sites are, where we have to treat, and how (*with which frequency*) we must treat that area/tissue.

As injuries produce a scar (*hardened tissue, which is energetically not functioning as easily as regular tissue*), every infection produces debris and substances which are not removed completely by the body's defense system and cleaning system. In fact, every infection or inflammation is causing tissue destruction. Function in those areas is impaired and slowed, resulting in accumulation of acidic material. Especially and foremost it is our lymphatic system, which is highly vulnerable by both infectious material and our daily food intake. Food allergies and intolerances for certain nutrients cause acidity and blocked sites in our lymph.

The author demonstrates the OMDAMED System.

### What is a Blockage?

A "blockage," or "blocked" site, or "interference field" is an area in the body with accumulated acids. The chemical symbol for an acid is H+. H+ is also called, hydrogen ion or simply "proton." Protons are micro magnets, according to Professor Cyril W. Smith of Salford University in England.

The acidity and the micromagnetic field of protons interferes with normal energy flow.

This "micro magnetic," proton-rich, and acidic area slows down or blocks normal energy flow. This area is therefore called "a blockage."

As H+ (*protons*) are acids and micromagnets, a micro magnetic field is very static. Nothing moves there.

It is easy and certain that the technician will find these blocked sites with this system, as we induce specific electromagnetic impulses into this static field. The tissue begins to answer, to respond. It could not answer to any stimulus before that induction-impulse. No answer means "blocked." A "non-answering tissue" would also not respond to oxygen or nutrients, or vitamins/minerals/herbs, and so forth.

*This is a major reason for fruitless and unsuccessful therapies!* It is known in physics that induction of EM-impulse into a magnetic field will result in "movement" or "jiggering" of electrons. Movement of electrons is a dynamic process and jump-starts energy flow.

The blocked, static, non-moving area (*where electrons are somewhat tight*) is converted into a dynamic, jiggering site, and the healthy flow of energy may be restored.

Ever since F. A. Popp postulated and subsequently proved that radiating bio-photons serve DNA as information transmitters, it has been known that these coded emissions function on the basis of their color content. It is therefore possible to influence the regulation of cell processes through the application of digitalized colors. In any case, these colors are required to fall within the specific resonance range of a given individual. The correct resonance range can be ascertained with the help of Nogier's pulse diagnosis procedure. Using this system, the proper colors to be digitalized can be

determined, leading to prompt and effective treatment.

Up to the present time, no other system is capable of establishing such a wide range of adjustable single frequencies. Note that in order to promote effective treatment, it is necessary to determine the required resonance frequency.

By the way, success with anti-aging seems to be doubtful without breaking the endless tape of chronic infection with this System.

### How Do You Do It?

O.K.—Sit down, relax and learn how to apply it:

- ◆ Important: The patient doesn't need to undress for the diagnosis or treatment as long as he is wearing thin clothes. That is very comfortable for the patient and the therapist!
- ◆ The method is simple:  
You need two tools to begin with: The ONDAMED machine and your thumb to palpate the pulse of the patient. Your patient is connected to the equipment by a forceps applicator around his neck.
- ◆ By turning the little wheel on the device's regulator, you introduce individual frequencies to the patient step by step.
- ◆ All of a sudden your thumb – on the radial pulse of the patient – feels a spike. Then you have found a special resonating frequency for that patient (*let's say you found a spike of the pulse at 135,61 Hertz*). By the way, the time for scrolling through all these frequencies up to 32.000 Hertz takes three minutes.

Let's have a glass of water first and relax again with it. The next step is as easy.

- ◆ You apply this individually-found frequency centrally to the neck of the patient by the forceps applicator. You move the second applicator, the area applicator along each zone from top to toe of the patient at the front, and at the back, right and left of the spine, beginning at the back of the head to the tailbone. Simultaneously you palpate the patient's pulse with your thumb. At any pulse reaction you just look where your hand applicator is pointing to during that scanning process. This would be regarded as a blocked site and you will treat it with that same frequency (*135,61 Hertz*) later. This is easy to learn. I have delegated this to technicians.
- ◆ Then you treat all found spots, beginning from top to toe with 135.61 Hertz.
- ◆ If you do not want to find these "blocked" zones by pulse reaction, you will not be successful in treating chronic diseases. You need a short training (*two days*) to gain knowledge to use the pulse reflex. The resonance frequency may change daily,

according to idiosyncrasy of the patient. In fact, you treat the patient layer by layer, like peeling an onion. Accordingly, the frequencies will change.

- ◆ A case example: A patient with chronic myo-endocarditis and chest pain following open heart surgery was pain-free by moving the area applicator along right hypochondriac region. That area was found by scanning when the pulse spiked there, when the area applicator pointed to that region.

The key for effective treatment, was locating the blocked zone around the upper right abdomen by a spiking pulse reflex.

- ◆ If you want to understand successful treatment of chronic disease, you must take the functional inter-net of organs into consideration. For instance, a heart problem could be caused by several dysfunctions or inflammations in other areas. In healing art it is compulsory to detect the network of dysfunctions. This can be done by pulse reflex, which is easy to learn. (*Do not mistake this with Chinese Pulse Diagnosis!*)

"Do you not have a device to tell me the pulse reaction?" asked some doctors and therapists. "Of course; that will be available one day and Rolf is working on it. However, in the meantime this equipment has been effectively working for nine years now. So do not be afraid to touch the patient! Get to him and trust your feeling," I replied. Technicians do that job wonderfully in my clinic, and provide the time for me to think and talk to the patient.

You see, I approach the patient and tell him, "We have found a resonating frequency of 135,61 Hertz, which is correlating with your smaller intestine." This is one of the most fascinating parts of ONDAMED. Each found frequency relates to an organ. That gives you a major hint to add certain curing remedies. Here you would add probiotics for the smaller intestine, or you would search for microorganisms. The smaller intestine is the haven for microorganisms as you may know.

With this system you can also search for microorganisms. You press some buttons and special frequencies, ready to detect microorganisms are available. You scroll through these frequencies, palpate the radial pulse simultaneously, and any pulse spike tells you: Here is our enemy! It may be Salmonella or Borrelia.

Ondamed therapy is rapidly promising the cure or substantial relief to several types of chronic disease. This approach to medicine is based upon the interaction of external EM impulses and the EM field of the human body. This model of disease is based on the assumption of a disruption of the EM field of the human body, which can be remedied by a judicious administration of external Electromagnetic (EM) impulses. The detection of specific frequencies related to diseased tissue/site/organ is done by observing the resonances invoked by the external

EM impulse. The resonances are detected by instrumentation connected to the patient, and the thumb of the therapist, which monitors the pulse quality (*Nogier*). This is the fundamental approach of Ondamed Therapy.

This therapy has met with a lot of clinical success in treating patients with chronic disease. This raises the important question of the underlying physical and biochemical process, which facilitates this Therapy. One plausible model is based on the idea of wave-mechanics and oscillatory phenomena. It is well known (*Karz/Kessler*) that each organ and site of the human body has very specific EM frequencies associated with it. Research at Massachusetts Institute of Physics has found very specific EM (*electromagnetic*) emissions of each individual organ. Clinical experience has helped map the pathology and symptomatology of disease to particular measurable frequencies of the distressed organs/areas/sites of human body (*Karz*).

One way to visualize this particular hypothesis of exactly how the underlying mechanism of this Therapy works, is to look at the body and its constituent parts/organs/sites as oscillators. For a healthy body, the ensemble of the oscillators function, or “vibrate” in “harmony” with each other. They vibrate– oscillate–like a string in music in lower tones and upper tones in octaves to each other.

The symptomatology of disease would be a departure from the healthy synchronous vibration. The parts of a diseased site/area/organ would display a lower energy or chaotic, asynchronous vibration.

This departure from an optimal state to a diseased state of the human body is detectable (*Nogier*). As shown above this detection is made by irradiating a part of the body with a particular frequency EM pulse while monitoring the radial pulse. The changes in the radial pulse being monitored helps pinpoint disease in the body/site/area/organ and its associated EM frequency. It is believed (*Kessler/Sharma*) that a very small shock is created to the cardiovascular system when a specific frequency hits a diseased site and then evoking a temporary “retuning” of the oscillating components through resonance. As a state of higher order is always

preceded by chaos Ilya Prigogine, “Order out of chaos” the former asynchronously vibrating components of the diseased site will resonate harmoniously for a second when hit by proper frequency. Since human being is a fractal structure – self similarity at different scales, or in other words: branch representative of the whole tree, the parts of the diseased site would respond synchronously, therefore evoking a small cardiovascular shock.

Further treatment with proper frequency would then bring all components back into line with tendency to keep state of higher order.

If you have swallowed all this up to this point, have a glass of water again. I prefer Deer Park water as the best.

You have now gained some insight into this fabulous new science, which could change your life and the face of your clinic in a heartbeat. However, you just got to know two parts of it. And as a chair cannot stand on two legs – it needs at least three – the ONDAMED has three phases:

- ◆ Special frequencies which are related to organs and find blockages.
- ◆ Other frequencies which are related to micro-organisms.
- ◆ 172 ingeniously designed programs.

You push another button and enter into the world of therapeutic programs. To find the proper program you again scroll through the numbers and palpate the radial pulse of your patient simultaneously. Any pulse change (*spike*) while scrolling will tell you: That is the needed program for your patient.

I think everybody may at least subconsciously know, that diseases are anchored centrally in the Nervous System. Pathological information and patterns are stored in the brain. As a matter of physics, they are electromagnetic interference frequency patterns. Whenever you intend to go into a healing process, it is therefore inevitable to also change part of your script. ONDAMED works in part with frequencies below 14 Hertz. That is exactly the domain of our brain waves.

The approach into this field is **groundbreaking**. ◆
